POWER CONVERSION PANEL FOR MARINE DRIVES

(GEK - 83845)

\

POWER CONVERSION PANEL FOR MARINE DRIVES

Function

The power conversion panel (PCP) is a modular enclosure containing the SCR bridge, control electronics and other devices to deliver and control DC power to a motor. It converts constant frequency, three phase AC voltage to a variable DC voltage.

Description (Refer to *Fig.* 1)

The main components of a power conversion panel consists of:

- SCR Bridge & High Voltage Interface
- Control Electronics
- Control Power Supply
- Motor Field Exciter
- Incoming Power Disconnect or Circuit Breaker

The arrangement of the particular modules in the panel will vary depending on space and packaging requirements and motor ratings (horsepower).

For a description of operation of each individual module refer to the appropriate publication in this manual.
