INTRODUCTION

This manual is a guide to the troubleshooting of General Electric's DS3828 SILTRON Power Conversion Module (PCM) for process control applications. The manual contains information, including diagrams and flowcharts, to help you find and correct problems that might occur. This manual is used in conjunction with another GE publication, ***the SILTRON Power Conversion Module Maintenance Manual (GEK-83768)***.

We assume that a user of this manual has knowledge and experience in electrical and electronics technology, as well as prior experience with industrial control systems.

In order to properly maintain SILTRON power conversion equipment, you need the following additional documentation:

- System elementary diagram
- DS3828 SILTRON Power Conversion Module Maintenance Manual (GEK-83768)

You also need the following test equipment:

- Multimeter or digital voltmeter
- Hand tachometer
- Strip chart recorder
- Dual Trace Oscilloscope
